## IMPROVEMENTS

- While performing a search in Case Management, an issue was resolved where the results on page 1 were duplicated on page 2 of the results page.
- After entering the GIST information on the Suspect tab within an Incident Report, the GIST information now transfers over to the Arrest Register while maintaining the original upper and lower cases.
- Improvements have been made to the Master Person Search to ensure that flags associated with a person are always displayed correctly on the search screen.
- Searching by Case # in a Miranda search is no longer case sensitive.
- When a user deletes a suspect from an Incident Report and that suspect is not listed "first", a resulting NIBRS issue was resolved.
- When searching for incidents in a specified sort order (ie, chronological, by case number, etc.) in Case Management, the case files are now sorted correctly.
- Within the user's profile admin section, clicking the "Check All" button will check all the boxes.
- When an offense is changed from NIBRS "reportable" to NIBRS "not reportable", any existing NIBRS errors are being cleared out appropriately.
- When performing a quick search for all inactive cases in the Case Management module, the results are successfully displayed instead of throwing an error.
- When creating a quick supplement report from any unapproved or approved report, the approval organization now matches the User's organization.
- On the Dashboard, Full Supplement reports are now displayed along with Initial Reports and Quick Supplement Reports.
- When performing a Master Search by synopsis, the second page of results now load without error.
- Performance improvements were implemented when generating monthly NIBRS reports.
- In the Property and Evidence Module, multiple entries with the same date now sort with the most recent entry listed at the bottom of the list.
- An issue was resolved where a user was no longer able to edit an offense after removing a linked vehicle.
- Updates to RMS were made to ensure the errors/NIBRS validation status of an unapproved report is retained when the reports are moved from the unapproved section to the NIBRS Module.
- When printing the Audit Report from the Property & Evidence Module, the sample size numbers have been corrected.
- When adding a warrant for a person with a Place of Birth that is a Country, the user is able to save the warrant without error.
- Juvenile Miranda forms will now save successfully.
- An issue was resolved where photos are not uploading in RMS when there is a space or parentheses in the image file name.
